

Got Runoff? Erosion? Standing Water? Drainage Problems?

A Winter Water Workshop for Local Residents

Hosted by Gold Ridge & Sonoma
Resource Conservation Districts

Wednesday, March 15th, 6-8pm
at Apple Blossom School Gymnasium
700 Watertrough Rd, Sebastopol, CA
Free to the public

The copious rain delivered by recent storms is a drastic change after five consecutive years of drought, and the soil is beyond saturated! We understand that it is hard to manage lots of water and so in response have put together a workshop to offer ideas on how to manage winter runoff.

Terracing

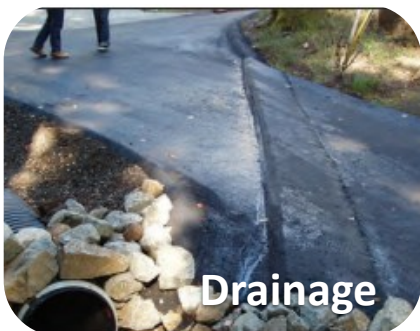

Rainwater Harvesting

How can we make the most of rain, protect soil from erosion and landslides, prevent potholes, increase infiltration to water tables and prepare for future drought? Join Gold Ridge and Sonoma RCDs and partners for a tradeshow-style workshop that explains good water stewardship practices.

You will have access to experts and information on where to get the tools or help you need. We'll cover a suite of projects that store, slow, spread and sink stormwater, including rainwater catchment, permeable paving, rain gardens, earth works, and more.

Permeable Surfaces

Drainage

Bring your questions, ideas, and concerns about managing water on your property. We hope to see you there!

For more information, contact: Gold Ridge RCD
